Patent No. 5648253
GENERAL INFORMATION:
TITLE OF INVENTION: Inhibitor-Resistant Urokinase
CORRESPONDENCE ADDRESS:
ADDRESSEE: Kilpatrick & Cody
STREET: 1100 Peachtree Street Suite 2800
                                                                                                                                                                                                                                                               COMPUTER REALABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/153,799
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 108 RRRPWCYVQVGLKPLVQECMVHDCADGKKPSSPPEE 143

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               554

A; Title: Differences between uterine and melanoma forms of tissue plasminogen activator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A) Molecule type: protein
A) Residues: 33-45;311-320 < POH>
A) Experimental Source: uterus cleavage of the activation peptide may also occur after 38-Gln
A) Note: in the uterus, cleavage of the activation peptide may also occur after 38-Gln

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    엄
```

```
A Map position: 4pi6-4pi6

C.Function:
Apachagos: activates hepatocyte growth factor by specific proteolytic cleavage
A.Description: activates hepatocyte growth factor by specific proteolytic cleavage
A.Description: activates hepatocyte growth factor by specific proteolytic cleavage
A.Pachway: tissue repair and regeneration
C.Superfamily: coagulation factor XII; EGF homology, fibronectin type I repeat homology
C.Superfamily: coagulation factor XII; EGF homology in plasma, serine proteinase
C.Superfamily: activates a serine proteinase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        plasmin (EC 3.4.21.7) precursor - dog (fragments)

Nylternate names: plasminogen

NyAlternate names: plasminogen

C;Species: Canis lupus familiaris (dog)

C;Date: 28-Oct-1994 #sequence_revision 28-Oct-1994 #text_change 12-May-1995

C;Accession: EG145

Enzyme 40, 63-69, 1988

A;Title: Structural aspects of the plasminogen of various species.

A;Attle: Structural aspects

Fine murine urokinase-type plasminogen activator gene.";
Biochemistry 26:8270-8279 (1987).
-! CATALYTIC ACTIVITY: Specific cleavage of Arg-|-Val bond in plasminogen to form plasmin.
-! SUBUNIT: FOUND IN HIGH AND LOW MOLECULAR MASS FORMS. EACH CONSISTS OF TWO CHAINS, A AND B. THE HIGH MOLECULAR MASS FORM CONTAINS A MOLECULAR MASS FORM TO YIELD A SHORT AI CHAIN (BY SIMILARITY).
-! SIMILARITY: CENTAINS IN EXINGLE Gomain.
-! SIMILARITY: Contains 1 EGF-like domain.

-!- PTM: THE SINGLE CHAIN, ALMOST FULLY ACTIVE ENZYME, CAN BE FURTHER PROCESSED INTO A TWO-CHAIN FULLY ACTIVE FORM BY A CLEAVAGE AFTER ARG-308 CATALYZED BY PLASMIN, TISSUE KALLIKREIN OR FACTOR XA.
-!- MISCELLANEOUS: BINDS TO THE KRINGLE STRUCTURE OF THE FIBRIN A CHAIN. BINDING TO FIBRIN ENHANCES ITS CATALYTIC ACTIVITY.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY $1.
-!- SIMILARITY: Contains 1 fibronectin type I domain.
-!- SIMILARITY: Contains 2 kringle domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EMBL; M23697; AAA41812.1; --
